

NUCOR[®]

SAFETY DATA SHEET

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

Trade Name: Ferrous Chloride Solution

CAS Number: 7758-94-3

Synonyms: Spent Pickle Liquor, K062 (only if a waste), spent etch lab acid

Use/Description: Liquid by-product from the Hydrochloric Acid Pickling of Steel or etching of steel

Company Identification:	24 Hour Contact – CHEMTREC 1-800-424-9300
Nucor Steel Arkansas 7301 E. County Road 142 Blytheville, AR 72315	Safety Officer [8:00 am – 5:00 pm]: 1-(870) 762-2100
Nucor Steel Berkeley 1455 Hagan Avenue Huger, SC 29450	Safety Officer [8:00 am – 5:00 pm]: 1-(843) 336-6000
Nucor Steel Decatur 4301 Iverson Boulevard Trinity, AL 35673	Safety Officer [8:00 am – 5:00 pm]: 1-(256) 301-3500
Nucor Steel Gallatin 4831 U.S. Hwy 42 West Ghent, KY 41045	Safety Officer [8:00 am – 5:00 pm]: 1-(859) 567-3100
Nucor Steel Indiana 4537 South Nucor Road Crawfordsville, IN 47933	Safety Officer [8:00 am – 5:00 pm]: 1-(765) 364-1323
Nucor Steel Memphis 3601 Paul R. Lowry Road Memphis, TN 38109	Safety Officer [8:00 am – 5:00 pm]: 1-901-786-5900

For general product information, contact facility as listed above. For emergencies, use the 24 Hour Contact.

2. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW

DANGER! CORROSIVE. AVOID SKIN AND EYE CONTACT. CAUSES SERIOUS DAMAGE TO SKIN AND EYES.

OSHA Hazards: Corrosive
Acute Toxicant

GHS Classification: Corrosive to Metals (Category 1)
Acute Toxicity (Category 4)
Eye Damage (Category 1)

Ferrous Chloride Solution

Pictogram(s):

Signal Word:

Danger

Hazard Statement(s):

H290: May be corrosive to metals

H302: Harmful if swallowed

H318: Causes serious eye damage

Precautionary Statement(s):

P264: Wash thoroughly after handling

P280: Wear protective gloves/protective clothing/eye protection/face protection.

P301+P312: IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell.

P302+P352: IF ON SKIN: Wash with plenty of soap and water.

P305+P351+P338: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

P310: Immediately call a POISON CENTER or doctor/physician.

Potential Health Effects

Primary Routes of Exposure

Eye and skin contact, inhalation.

Eye Contact

Corrosive. Can cause redness, pain, blurred vision, severe burns, corneal scarring and blindness.

Skin Contact and Absorption

Corrosive. Can cause burns, irritation, reddening, or burning sensations. No absorption is expected to occur through intact skin.

Inhalation

Inhalation of mists may produce severe respiratory irritation. Inhalation of mists or vapors generated by heating this product may be severely irritating to mucous membranes and respiratory system. Vapor from heating this product is primarily steam, but may contain hydrochloric acid vapors and may cause irritation or damage to throat and upper respiratory tract.

Ingestion

Corrosive. Causes damage to gastrointestinal tract and cardiovascular system following oral exposure.

Chronic or Special Toxic Effects

Hexavalent chromium is categorized as an A1 carcinogen (Confirmed Human Carcinogen) by ACGIH. Cadmium is categorized as an A2 carcinogen (Suspected Human Carcinogen) by ACGIH. Lead is categorized as an A3 carcinogen (Confirmed Animal Carcinogen) by ACGIH. IARC classifies lead as a Group 2B carcinogen (Possibly Carcinogenic to Humans). IARC classifies chromium and hydrochloric acid as Group 3 carcinogens (Unclassifiable as to Carcinogenicity to Humans). Cadmium is on NTP's list of agents, substances, and mixtures of Reasonably Anticipated to Be Human Carcinogens.

Target Organs

Overexposure to specific components of this product may cause adverse effects to the following organs or systems: respiratory system, eyes, skin, gastrointestinal tract, and cardiovascular system.

Medical Conditions Aggravated by Exposure

Individuals with chronic respiratory disorders (i.e., asthma, chronic bronchitis, emphysema, etc) may be adversely affected by low level exposures.

Ferrous Chloride Solution

3. COMPOSITION/INFORMATION ON INGREDIENTS

Components	CAS No.	% Weight	Exposure Limits				
			ACGIH TLV (mg/m ³)		OSHA PEL (mg/m ³)		
Hydrochloric Acid	(HCl)	7647-01-0	1-10%	5 ppm	(Ceiling)	5 ppm	(Ceiling)
Iron	(Fe)	1309-37-1	8-17%	5	Fe ₂ O ₃ Dust and Fume	10	Fume

Exact specifications for specific products may be available upon request.

4. FIRST AID MEASURES

Eye Contact

Immediately flush eyes with plenty of water, for at least 20 minutes. Lift the upper and lower lids occasionally. Obtain medical attention immediately.

Skin Contact

Flush skin with plenty of water, for at least 20 minutes. If there is widespread contamination, remove contaminated clothing under safety shower and wash exposed areas with soap and large quantities of water. Obtain medical attention immediately. Launder contaminated clothing before reusing.

Inhalation

If symptomatic, move to fresh air. Perform artificial respiration, if necessary, and obtain medical attention immediately. Do not use mouth-to-mouth method if victim ingested or inhaled the substance; induce artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device.

Ingestion

Rinse mouth. DO NOT INDUCE VOMITING. Give plenty of water to drink. Obtain medical attention immediately.

Other

Understand the facility's emergency rescue procedures and know the locations of rescue equipment before the need arises.

5. FIRE FIGHTING MEASURES

Flash Point (Method): Not available

Flammable Limits (% volume in air): Not available

Auto ignition Temperature: Not available

Extinguishing Media

Small Fires—Dry chemical, dry sand, alcohol resistant foam, or CO₂.

Large Fires—Alcohol-resistant foam, water fog, or water spray (not water streams). Move containers from fire area if safe to do so. Dike fire control water for later disposal; do not scatter the material.

Fire involving tanks or car/trailer loads—Fight fire from maximum distance or use unmanned hose holders or monitor nozzles. Do not get water inside containers. Cool containers with flooding quantities of water until well after fire is out. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank. ALWAYS stay away from ends of tanks. ISOLATE for 800 meters (1/2 mile) in all directions; also, consider initial evacuation for 800 meters (1/2) mile in all directions.

Special Fire Fighting Procedures: Exposure to unknown concentrations of fumes or mists requires the wearing of a pressure-demand airline respirator or pressure-demand self-contained breathing apparatus.

Unusual Fire or Explosion Hazards: None known

Ferrous Chloride Solution

6. ACCIDENTAL RELEASE MEASURES

Precautions if Material is Spilled or Released: Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Stop leaks if safe to do so. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand or other non-combustible material and transfer to containers. Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate enclosed areas.

7. HANDLING AND STORAGE

Store in drums or tanks that are designed to withstand low pH corrosive liquids. Store in well-ventilated, cool, dry places away from strong bases and sources of heat and ignition. Ground all transfer equipment. Use confined space entry procedures when entering vessels that have contained spent pickle liquor. Do not use air pressure or apply heat with open flame to remove spent pickle liquor from drums. "Empty" drums may retain solid, liquid, and/or vapor residues. Continue to observe all precautions on label as if empty drum were full. Do not cut, puncture, torch, or weld on or near the emptied drum. Do not use drum for other purposes.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Eye Protection

Wear chemical goggles or face shield when the risk of splashing is present.

Skin

Wear polyvinyl chloride (PVC), natural rubber, neoprene, butyl rubber, viton, nitrile or polyvinyl alcohol (PVA) gloves and protective clothing appropriate for the risk of exposure. Structural firefighters' protective clothing will only provide limited protection.

Respiratory Protection

When potential exposures are above the occupational limits shown in Section 3, approved respirators must be used as specified by an industrial hygienist or other qualified professional. Respirator users must be medically evaluated to determine if they are physically capable of wearing a respirator. Quantitative and/or qualitative fit testing and respirator training must be satisfactorily completed by all personnel prior to respirator use. Users of any style respirator must be clean shaven on those areas of the face where the respirator seal contacts the face. Exposure to unknown concentrations of vapors or mists requires the wearing of a pressure-demand airline respirator or pressure-demand self-contained breathing apparatus. Pressure-demand airline respirators are recommended when performing jobs with high potential exposures such as entering vessels that have contained spent pickle liquor.

Ventilation and Engineering Controls

Good ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. Supplementary local exhaust ventilation may be needed in some circumstances. Ventilation equipment should be checked regularly to ensure it is functioning properly.

Recommended Decontamination Facilities

Eye wash, washing facilities, and safety shower.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance and Odor: Brown liquid

Boiling Point: Not available

Melting Point: Not available

pH: <2

Specific Gravity (at 15.6°C): 1.18-1.40

Density (at 15.6 °C): Not available

Ferrous Chloride Solution

Vapor Pressure: Not available

Vapor Density (air = 1): Not available %

Volatile, by Volume: Not available

Solubility in Water: Infinite.

Evaporation Rate (Butyl Acetate = 1): Not available **Other**

Physical and Chemical Data: None

10. STABILITY AND REACTIVITY

Stability: Stable under normal conditions

Conditions to Avoid: May react violently with bases. Reactions with metals can release flammable hydrogen gas. Hydrogen chloride can react with cyanide, forming lethal concentrations of hydrocyanic acid.

Incompatibility (Materials to Avoid): Bases, mercuric sulfate, perchloric acid, carbides of calcium, cesium, rubidium, acetylides of cesium and rubidium, phosphides of calcium and uranium and lithium silicide.

Hazardous Decomposition Products: Oxides of iron, chrome, lead and cadmium may be formed.

11. TOXICOLOGICAL INFORMATION

The ACGIH Threshold Limit Value for iron oxide was set in order to prevent the development of x-ray changes in the lung from long-term exposure. These changes are not considered to be associated with any physical impairment of lung function. This deposition and collection of iron, which is responsible for the x-ray changes noted above, is called siderosis and is considered benign. Iron oxide dust and fumes are categorized as A4 carcinogens (Not Classifiable as a Human Carcinogen) by ACGIH.

Acute poisoning from cadmium oxide-containing fumes has resulted in delayed effects (4-10 hours) of shortness of breath and cough. There could be a burning sensation, tightness, or pain in the chest. Symptoms of metal fume fever are possible. Acute pulmonary edema may develop 24 to 48 hours after exposure; in other cases only rales may be heard. Decreased FVC (forced vital capacity) and FEV₁ (forced expiratory volume during the first second) are found, and carbon monoxide diffusion capacity may be reduced. In mild cases, the symptoms are resolved over a week's time. In severe cases, the shortness of breath is progressive, leading to death (characteristically within the first week after exposure).

Chronic effects of cadmium exposure have been reported to the kidneys, liver, and lungs (emphysema), have been reported. The ACGIH has designated cadmium as a suspected human (A2) carcinogen. The criteria for A2 carcinogens are that the agent is carcinogenic in experimental animals at dose levels, by route(s) of administration, at site(s), of histological type(s), or by mechanism(s) that are considered relevant to worker exposure. Available epidemiologic studies are conflicting or insufficient to confirm an increased risk of cancer in exposed humans.

Hydrochloric acid, when inhaled, may cause irritation of the respiratory tract with burning, choking, and coughing. Severe breathing difficulties may occur, which may be delayed in onset. At times ulceration of the nose and throat may occur. Hydrochloric acid may cause eye irritation, severe burns, and permanent damage with loss of sight. Solutions of hydrochloric acid may cause severe burns of the skin. Repeated or prolonged exposure to hydrochloric acid may cause erosion of the teeth and/or dermatitis.

Chromium occurs in two commercially important valence states, tri- and hexavalent. There are two trivalent compounds (chromic oxide and chromic sulfate) and several hexavalent compounds (including chromium trioxide, chromic acid, and dichromate salts of sodium, potassium and other metals). Trivalent chromium compounds have low toxicity. Hexavalent chromium compounds are irritants and corrosive. Inhalation of high concentrations of hexavalent compounds produces coughing, wheezing, pain on inspiration, fever, loss of weight, and may cause pneumonitis. Skin contact can cause severe local irritation and corrosion. Chronic

Ferrous Chloride Solution

exposure to nonrespirable chromium dust can produce lesions in the upper respiratory system, eye lesions, and asthma in some individuals. Pneumoconiosis is also possible. Skin exposure to coarse mists and splashes can produce ulcers. Dermatitis is common to compounds of both chromium valence states. The ACGIH has designated hexavalent chromium compounds as confirmed human (A1) carcinogens. Chromium metal and trivalent chromium compound have been designated as A4 carcinogens (Not Classifiable as a Human Carcinogen) due to lack of data. IARC classifies chromium as a Group 3 carcinogen (Unclassifiable as to Carcinogenicity to Humans).

Lead poisoning is essentially a chronic disease, caused by gradual accumulation. At high levels of exposure, toxic levels may accumulate within days or weeks. Organs that are particularly sensitive to lead exposure are the hemopoietic system, kidneys and the central nervous systems. Joint pain and gastrointestinal symptoms, such as anorexia, nausea, weight loss, and abdominal discomfort, are also common. Male and female reproductive effects are also possible.

12. ECOLOGICAL INFORMATION

Aquatic Ecotoxicological Data

This material is toxic to fish and wildlife. Do not discharge into lakes, streams, ponds, etc.

13. DISPOSAL CONSIDERATIONS

Dispose in accordance with federal, state, and local health and environmental regulations. Material may be considered an EPA listed waste (K062).

14. TRANSPORT INFORMATION

DOT Proper Shipping Name: Ferrous Chloride, solution
DOT Hazard Class: 8
UN/NA Number: NA1760
DOT Packing Group: II
Labeling Requirements: Required
Placards: Required

15. REGULATORY INFORMATION

NOTE: The regulatory information contained in this Safety Data Sheet (SDS) is not intended to be comprehensive.

California Proposition 65:

⚠ WARNING: This product can expose you to chemicals including chromium, cadmium and lead which are known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

Massachusetts Substance List: Cadmium, Chromium, Hydrochloric acid, Iron chloride, Lead, Manganese

Pennsylvania Hazardous Substance List: Cadmium, Chromium, Hydrochloric acid, Iron chloride, Lead, Manganese

New Jersey Hazardous Substance List: Cadmium, Chromium, Hydrochloric acid, Iron chloride, Lead, Manganese

The Resource Conservation and Recovery Act (RCRA)

Ferrous Chloride Solution

Product is a RCRA listed Hazardous Waste (K062).

Toxic Substances Control Act (TSCA)

Components of this product are listed on the TSCA Inventory.

Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)

Unpermitted releases in excess of 10 pounds must be reported to the National Response Center.

Superfund Amendments and Reauthorization Act of 1986 (SARA), Title III

HAZARD CATEGORIES: Immediate Health Effect, Delayed Health Effect

This product contains the following EPCRA Section 313 chemicals subject to the reporting requirements of section 313 of the Emergency Planning and Community Right – To – Know Act of 1986 (40 CFR 372):

SECTION 313 REPORTABLE INGREDIENTS BASED ON NORMAL PRODUCTS:

<u>Chemical Name</u>	<u>CAS Number</u>	<u>Concentration (% by weight)</u>
Hydrochloric Acid	7647-01-0	<10
